# FE Assignment

HTML5 CSS3 for Mobile Gaming portal

Test assignment context

Make a homepage for a mobile game portal, inspired by www.coolgames.com.

Requirements

• Build a single page "mini" portal using a CSS Preprocessors, HTML5 and jQuery.

• Use a client template engine like handlerbars.js and have a carrousel showing the first 3 games.

• Load the games from attached json file "games.json".

• Don't need to implement links to external pages or extended features like search.

• All games should be links using gamePlayUrl field.

What will be evaluated?

Creativity and design of the single page.

User experience and functionality.

Structure and quality of the code.

Usage of 3rd party libraries and tools.

Page load performance.

Attachements

External JSON file: games.json
